By Bill Chitwood
I really liked this book, but unless SHTF I will probably never try any of the projects. I especially liked the knife idea and the tomahawk. If there had been pictures of the individual steps involved or at the very least a picture of the finished project, I would have given it five stars.

I should have read the description better. Only 5 projects in total. No pictures no illustrations and no step by step directions. Yes there are some directions but many steps are omitted and the final product is left to your imagination. If you knew what the final piece was going to look like, the steps might make more sense. Don't bother.

There are much better books. Don't waste your money. I'm happy people are writing about the subject ,but come on. Talk about techniques and problems a person could encounter.
