Forging, Die Sinking, and Machine Forming of Steel, Modern Shop Practice, Processes, Methods, Machines, Tools and Details, a Practical Treatise on the Hot and Cold (Classic Reprint):

0 of 0 people found the following review helpful. Old but goodBy CustomerObviously this is old, but it still contains some very interesting observations of forging practice and improvements. I particularly liked the view of the world it contains, one of making things and employing more people in the process, contrasted with today where it's all about cutting back and offshoring.

The hot and cold shaping, squeezing, forming, and bending of duplicate metal parts and high-speed steel cutting tools by forging in drop-dies, drop-hammers, steam-hammers, hydraulic presses, and forging-machines, are becoming more appreciated by the most advanced manufacturers and mechanics; but, until the publication of this work, to the average mechanic familiarity with the advanced shop practice, tools, and processes has been denied, because of the almost total lack of descriptive practical literature, and also the conservatism of manufacturers and experts in publishing their shop-practice and knowledge evolution. Therefore, to make possible among mechanics a broad and comprehensive knowledge of these arts I present this book, hoping it will find a valuable and permanent place in its field. Joseph V.
