David Wright : Modelling Ports and Inland Waterways: A Guide for Railway Modellers before purchasing it in order to gage whether or not it would be worth my time, and all praised Modelling Ports and Inland Waterways: A Guide for Railway Modellers:

Considers the history of ports and inland waterways, and the important role played by the railways in facilitating their operation. Provides layout plans and ideas, all based on prototypes, that are aimed specifically at the scratch builder. Presents a selection of modelling projects, including dioramas of both a canal wharf and two different estuary ports, supported by step-by-step photograhs, drawings and track plans. Pays attention to modelling some of the smaller

vessels that might be included in a model as well as to the wharf and quayside buildings and equipment. Discusses the modelling and painting techniques that can be used to create realistic-looking water. Demonstrates how models can be made more convincing and brought to life by the addition of appropriate colour and weathering, and by the use of scale models of workers, and even birds and animals.

About the Author David Wright is a professional artist and model maker who has written numerous articles in the railway modelling press. He is well known at the major railway modelling exhibitions where he is especially renowned for his informative demonstrations and theatre presentations. This is David's third book for Crowood, his first two being the highly acclaimed *Making Rural Buildings for Model Railways* and *Making Urban Buildings for Model Railways*.
